## SUPPLY CHAIN & OPERATIONS ANALYTICS

Poznań, Poland | +48 516 901 712 | ombhartiya16@gmail.com

LinkedIn | Power BI portfolio

### PROFESSIONAL SUMMARY

Operations and reporting analyst with 5+ years of combined experience across manufacturing, process control and business operations, including recent dedicated Power BI work. Combines an Engineering and Industrial Management degree with practical Oracle ERP reconciliation, production reporting, data validation and stakeholder requirements experience. Brings a process-focused approach to operational KPI reporting, inventory visibility and cross-functional information flows, with a career focus on supply chain analytics.

### CORE CAPABILITIES

**Operational analysis:** Production and inventory reporting, discrepancy investigation, root-cause analysis, reporting standardization and process documentation.

**Reporting tools:** Excel, Power BI, Power Query, DAX, semantic models and star-schema modeling; REST API and file-based data preparation.

**Business collaboration:** Requirements gathering, KPI definitions, user testing, cross-functional communication and workflow adoption support.

**Systems:** Oracle ERP reconciliation; guided Microsoft Fabric workflow exposure; developing SQL capability through practical learning.

### PROFESSIONAL EXPERIENCE

#### Data & Operations Analyst | DEFOR SA

May 2025 - July 2026

- Delivered Power BI reporting for construction and facade-production operations, supporting up to 15 stakeholders across concurrent projects and 10 production stages.
- Combined four operational data sources, including REST API and file-based inputs, into semantic models that provided a consistent view of production and project status.
- Translated stakeholder requirements into KPI definitions, Power Query transformations and reusable DAX measures; validated outputs against source records and supported user testing.
- Improved report refresh performance and helped operational teams access more current status information for reporting and follow-up.
- Supported guided Fabric ingestion work and contributed to internal web applications; work shifted toward web-application development from May 2026.

#### Operations Data & Reporting Analyst | All For Expo

February 2023 - April 2025

- Gathered requirements across inventory, project and financial workflows, helping consolidate fragmented spreadsheets and manual trackers into shared operational reporting.
- Coordinated with business users and technical delivery to clarify stock-movement, order, invoice, payment and delivery-tracking requirements.
- Documented workflow steps and reporting definitions to improve consistency across operational handoffs and support issue investigation.
- Prepared onboarding guidance and process documentation so users could follow the new digital workflows consistently.

**Process Control & Reporting Engineer | UFLEX Group**

October 2019 - September 2022

- Reconciled Oracle ERP records with reported production outputs, investigating discrepancies before information was used for management reporting.
- Prepared two production summaries per day to make downtime and quality issues visible to engineering and production teams.
- Maintained Excel reporting records and repeatable verification steps, supporting consistent checks and follow-up on recurring production-data issues.
- Created process and training documentation linking operational checks, engineering requirements and reporting practices.

## RELEVANT PROJECT

**Warehouse Management Application** | Independent, AI-assisted project

Designed stock-movement and product-tracking workflows and built an application with AI coding assistance. The project brought inventory views and dashboard statistics into one interface. Demonstrates workflow design and operational reporting interests; it is separate from employer production experience.

## EDUCATION

**B.Eng. in Engineering & Industrial Management**
Poznań University of Technology | Awarded March 2026

Erasmus Blended Intensive Programme | Babeș-Bolyai University, Romania | 2024
