OM BHARTIYA

DATA & REPORTING ANALYST | POWER BI ANALYST

Poznań, Poland | +48 516 901 712 | ombhartiya16@gmail.com
LinkedIn | GitHub | Portfolio
Full work rights in Poland (residence permit holder)

PROFESSIONAL SUMMARY

Data and Reporting Analyst with 5+ years of total cross-domain experience across manufacturing reporting, process control, project operations and business reporting, including recent dedicated Power BI work. Uses Power BI, SQL, Power Query and Data Analysis Expressions (DAX) to improve reporting speed, data consistency and operational visibility. Brings additional experience in Oracle enterprise resource planning (ERP) reconciliation, production reporting, requirements gathering and process documentation.

SKILLS

Analytics & reporting: Power BI, DAX, Power Query, SQL, Microsoft Excel, KPI reporting, dashboard development and data reconciliation

Data modeling & preparation: Star schema modeling, semantic models, data transformation, data quality checks, incremental refresh and extract, transform and load (ETL) workflow exposure

Business & operations: Requirements gathering, process mapping, root cause analysis, Oracle ERP, manufacturing reporting and construction analytics

Documentation & adoption: Standard operating procedure (SOP) development, process documentation, user onboarding materials and workflow adoption support

Additional technical exposure: Microsoft Fabric, OneLake, Delta tables, PySpark, Python, REST APIs and Autodesk Construction Cloud; used primarily in guided or project-based work

WORK EXPERIENCE

Data & Operations Analyst | DEFOR SA

May 2025 - Present

- **Built the company's first centralized Power BI reporting capability** as the sole analyst, supporting up to 15 stakeholders across 3-5 concurrent projects and 10 production stages.
- **Unified 4 data sources** - a REST API, Autodesk Construction Cloud, Speckle failover data and CSV files - in a star-schema semantic model, replacing manual reconciliation with one operational reporting view.
- **Reduced refresh time from 5-15 minutes to 1-2 minutes** by implementing incremental refresh, enabling faster self-service status reporting for production and project users.
- **Developed reusable reporting logic and views** with Power BI, Power Query, DAX and SQL for production-unit tracking, status monitoring and 3D-linked site visibility.
- **Supported development and testing** of a paginated REST-to-Fabric ingestion workflow using OneLake, PySpark and Delta tables, including incremental watermarks and Bronze-to-Silver processing for 5,000+ records per load.

Operations Data & Reporting Analyst | All For Expo

Feb 2023 - Apr 2025

- **Centralized operational tracking for 4 divisions** in one enterprise portal, replacing separate WhatsApp, email and spreadsheet workflows with a shared view of active work.
- **Consolidated 3 operational data areas** - inventory, project and financial information - across 4 divisions, improving data consistency and lifecycle visibility for active projects.
- **Translated business-user requirements** into automated digital workflows, replacing informal handoffs with more consistent steps for project and operations teams.
- **Coordinated between business users and technical delivery**, clarifying workflow requirements and communicating operational priorities during development of the centralized portal.
- **Prepared user onboarding documentation and digital learning resources**, giving teams a consistent reference for following the new operational workflows after rollout.

Process Control & Reporting Engineer | UFLEX Group *Oct 2019 - Sep 2022*

- **Reconciled Oracle ERP records** against live production output before management reporting, maintaining 99% reporting accuracy and identifying discrepancies before release.
- **Prepared 2 production summaries per day**, giving engineering teams visibility into downtime and quality issues so corrective actions could be prioritized.
- **Designed repeatable process controls** linking engineering requirements with Oracle ERP validation before management reporting.
- **Created process and training documentation** that standardized verification steps and supported consistent reporting practices across recurring production checks.

PROJECTS

- **Warehouse Management System (AI-assisted project):** Designed the workflow and, with generative-AI coding support, created a React/TypeScript role-based application for products, stock movements and dashboard statistics, replacing fragmented inventory views with one operational interface.
- **Building Information Application (collaborative, AI-assisted project):** Co-built a React/Vite web application using Xano and Python for IFC, FRAG and GLB models, with value overlays, filtering and synchronized plan/3D views to improve cross-functional site visibility.

EDUCATION

B.Eng. in Engineering & Industrial Management: Poznań University of Technology | 2022-2026 | Awarded March 2026

Erasmus Blended Intensive Programme: Babeș-Bolyai University, Romania | 2024

CERTIFICATIONS

Data & analytics: Microsoft ETL Specialization; IBM Python for Data Science; UC Davis SQL for Data Science

Business & operations: CSCMP Supply Chain Foundations: Demand Planning Professional Certificate; Salesforce Sales/Operations Professional Certificate

In preparation: Microsoft Power BI Data Analyst (PL-300) and Microsoft Fabric Analytics Engineer (DP-600)

LANGUAGES

English: Fluent (C1)

Polish: Beginner (A1)
