OM BHARTIYA

JUNIOR DEVELOPER — BUSINESS INTELLIGENCE & PROCESS AUTOMATION

Power BI · SQL · Microsoft Fabric · React/TypeScript · Oracle ERP · B.Eng. Engineering Management

Poznań, Poland · +48 516 901 712 · ombhartiya16@gmail.com

Based in Poznań, Poland · Open to hybrid and relocation within Poland · Available immediately

PROFESSIONAL SUMMARY

Junior developer and analyst with four years across manufacturing operations and software, and a B.Eng. in Engineering Management from Poznań University of Technology. Three years at Flex Films Europa (UFlex Group) working daily inside Oracle ERP — reconciling system records against live production output, issuing daily management reporting and maintaining the process documentation behind recurring checks. Most recently fourteen months at DEFOR SA, setting up the company's first centralised Power BI reporting as sole analyst before moving into the development department as Junior Programmer. Strongest where an operational process has to become something that actually runs — data modelling, automation and reporting on the Microsoft stack, built with AI-assisted tooling.

CORE SKILLS

Microsoft data stack: Power BI (DAX, Power Query, star-schema modelling, incremental refresh), SQL, Microsoft Fabric, OneLake, Delta tables, PySpark — Power BI used in a production reporting role for 7 months

Build & integration: REST API integration, React/TypeScript front-end, Python, data pipeline design (Bronze-to-Silver, incremental watermarks), Autodesk Construction Cloud and Speckle data sources

Operations & ERP: Oracle ERP reconciliation, production and inventory reporting, data validation and quality checks, discrepancy investigation, root cause analysis, SOP and process documentation

Ways of working: AI-assisted development as a daily tool, requirements gathering with business users, cross-functional work with production, quality and project teams, documentation and user onboarding

Certifications: Microsoft ETL Specialization · IBM Python for Data Science · UC Davis SQL for Data Science · CSCMP Supply Chain Foundations · Microsoft PL-300 in progress

PROFESSIONAL EXPERIENCE

DEFOR S.A. — Śrem, Poland 19.05.2025 – 31.07.2026

Pracownik Działu Technicznego ALU (Technical Department, ALU), 19.05.2025 – 31.03.2026 · Młodszy Programista (Junior Programmer), 01.04.2026 – 31.07.2026

Full-time. Joined in technical 3D design, moved to the development department, and carried BI and operational reporting from September 2025; front-end development in the final months.

- **Built the company's first centralised Power BI reporting capability** as sole analyst, supporting up to 15 stakeholders across 3–5 concurrent projects and 10 production stages.
- **Unified 4 data sources** — a REST API, Autodesk Construction Cloud, Speckle failover data and CSV files — into one star-schema semantic model, replacing manual reconciliation with a single operational reporting view.
- **Cut report refresh time from 5–15 minutes to 1–2 minutes** by implementing incremental refresh, enabling faster self-service status reporting for production and project users.
- **Developed reusable reporting logic** in Power BI, Power Query, DAX and SQL for production-unit tracking, status monitoring and 3D-linked site visibility.
- **Supported development and testing** of a paginated REST-to-Fabric ingestion workflow using OneLake, PySpark and Delta tables, including incremental watermarks and Bronze-to-Silver processing for 5,000+ records per load.
- **Contributed front-end development** in React/TypeScript for an internal company application following the April 2026 department transfer.

Flex Films Europa Sp. z o.o. (UFlex Group) — Września, Poland Oct 2019 – Sep 2022

Diploma Engineer Trainee (DET) — production, process control and reporting

- **Reconciled Oracle ERP records** against live production output before management reporting, maintaining 99% reporting accuracy and identifying discrepancies before release.
- **Prepared 2 production summaries per day**, giving engineering teams visibility into downtime and quality issues so corrective actions could be prioritised.
- **Designed repeatable process controls** linking engineering requirements with Oracle ERP validation ahead of management reporting.
- **Created process and training documentation** that standardised verification steps across recurring production checks.

EDUCATION

B.Eng. (inżynier), Engineering Management — Poznań University of Technology, Poland 2022 – 2026

Awarded February 2026 · Final GPA 4.44 / 5 — "very good" · Discipline: Management and Quality Studies · Erasmus Blended Intensive Programme, Babeș-Bolyai University, Romania (2024)

Diploma in Mechanical Engineering — Amity University Uttar Pradesh, India 2016 – 2019

First Division

PROJECTS

- **Warehouse Management System (AI-assisted personal project).** Designed the workflow and, with generative-AI coding support, built a React/TypeScript role-based application for products, stock movements and dashboard statistics, replacing fragmented inventory views with one operational interface.
- **Building Information Application (collaborative, AI-assisted personal project).** Co-built a React/Vite web application using Xano and Python for IFC, FRAG and GLB models, with value overlays, filtering and synchronised plan/3D views.
