Portfolio

Professional Summary

Data Engineer & Full-Stack Developer with 5+ years of experience in manufacturing and operational environments. Deep expertise in **Microsoft Fabric, PySpark, SQL, React, and Node.js**, leveraging end-to-end data pipelines and custom-built web applications to **eliminate manual overhead, ensure data integrity, and provide real-time visibility**. Currently architecting scalable data solutions at **DEFOR SA**, transforming fragmented API and 3D/BIM data into actionable insights for production and logistics, successfully bridging the gap between engineering requirements and production-grade software delivery.

Work Experience

Data Analyst / Power BI Developer | DEFOR SA

May 2025 – Present

- **Accelerated reporting performance by 90%** by replacing full-reload data pipelines with optimized incremental loading, ensuring sub-minute dashboard refreshes for real-time operations.
- **Established the company's first Power BI center of excellence**, delivering end-to-end analytics across 10 production stages for 15+ stakeholders, eliminating manual reporting overhead.
- **Unified 4+ fragmented data sources** (REST API, Autodesk Construction Cloud, Speckle, CSV) into a centralized star-schema semantic model, enabling 3D-linked unit tracking and cross-functional visibility.
- **Engineered scalable ETL workflows in Microsoft Fabric** using PySpark and SQL, processing 5,000+ records per load to manage data ingestion for thousands of daily production units.

Operations Data & Reporting Analyst | All For Expo

Feb 2023 – Apr 2025

- **Centralized operational tracking** across 4 major divisions, replacing scattered workflows (WhatsApp/email/spreadsheets) with a single, unified source of truth.
- **Improved data integrity** by consolidating disparate datasets, enabling reliable inventory control and financial monitoring for every project lifecycle.

Process Control & Operational Reporting Engineer | UFLEX Group

Oct 2019 – Sep 2022

- **Ensured 99% data accuracy** by auditing and reconciling Oracle ERP entries against live production output, driving process improvements in downtime and quality management.
- **Enhanced operational transparency** by generating high-frequency (bi-daily) production summaries, providing actionable insights for engineering-led corrective actions.

- **Designed automated process controls** that bridged engineering requirements with ERP data, establishing the "verification-first" mindset that now guides my data-modeling approach.
-

Skills

Data Engineering & BI

Microsoft Fabric, ETL Pipelines, PySpark, SQL, Power BI (DAX/M), Semantic Modeling

Full-Stack Development

React, Vite, Node.js, TypeScript, REST APIs, 3D Rendering (IFC/GLB)

Process & Operations

Oracle ERP, Autodesk Construction Cloud, Requirements Gathering, BPMN/UML

Selected Projects

- **Warehouse Management System:** Independently designed and built a full-stack application (React/TypeScript/Node.js) to automate inventory tracking, replacing manual workflows (WhatsApp/Email) and establishing a single source of truth for stock movements.
- **Building Information Application:** Co-built a 3D web application (React/Vite) rendering IFC/GLB models with real-time construction status overlays, significantly enhancing cross-functional site visibility.

Education

- B.Eng. in Engineering & Industrial Management | Poznań University of Technology (2022–2026)
- Erasmus BIP | Babeş-Bolyai University, Romania (2024)

Certifications

- Microsoft PL-300 Candidate
- IBM Python for Data Science
- UC Davis SQL for Data Science
- Microsoft ETL Specialization
- CSCMP Supply Chain Foundations: Demand Planning Professional Certificate
- Salesforce Sales/Operations Professional Certificate

Languages

- English: Fluent (C1) | Polish: Elementary (A1)
