PROFILE

Reporting analyst with four years of work on production and operations data. As the only analyst at a façade manufacturer, built the company's first centralized Power BI reporting, with KPIs agreed with the CEO and department managers and used by 15 stakeholders across 10 production stages. Before that, three years of shift reporting and Oracle ERP reconciliation in a packaging film plant.

EXPERIENCE

Operations & Reporting Analytics (Junior Programmer)
DEFOR S.A., Śrem | 05/2025 – 07/2026

- Built the company's first centralized Power BI reporting as its only analyst: a star-schema model combining four sources (REST APIs, Autodesk Construction Cloud, CSV files and a failover source) with DAX measures and Power Query (ETL) transformations.
- Gathered reporting requirements and feedback from manufacturing and on-site managers, and agreed KPI definitions with the CEO and department managers.
- Delivered dashboards to 15 stakeholders across 3–5 concurrent projects and 10 production stages; managers used them to spot delayed stages and off-target KPIs, and I refined the reports from their feedback.
- Built the REST API ingestion into Microsoft Fabric with AI-assisted coding (API calls, pagination, incremental loads of 5,000+ records), replacing full reloads that caused memory spikes.
- Cut report refresh time from about 5–15 minutes to 1–2 minutes with incremental refresh.
- Built internal web apps with AI-assisted coding (Codex), including 2D/3D construction-status views.

Process Control & Reporting Engineer
Flex Films Europa (UFlex Group), BOPET packaging film plant, Września | 10/2019 – 09/2022

- Produced daily MIS reports for night and day shifts on production output, material used, downtime and batch details.
- Reconciled Oracle ERP input/output, batch and inventory records against shop-floor data and investigated discrepancies before they reached management reporting.
- Analysed efficiency gaps, downtime and quality issues to support root-cause analysis and follow-up actions.
- Monitored production KPIs across 2 active lines per shift; maintained SOPs and operations checklists, and prepared training material.

PROJECT

No-code operations app for a small company (bachelor's thesis)
Poznań University of Technology

- Built a no-code in-house app in Bubble.io, with AI-assisted development, that brought project, inventory and payment data out of email, texts, calls and WhatsApp into one system.

EDUCATION

B.Eng., Engineering & Industrial Management
Poznań University of Technology | 2022 – 2026 (awarded Feb 2026, approx. 4.5/5) | Erasmus BIP, Babeș-Bolyai University, Romania, 2024

SKILLS

- Reporting & BI: Power BI (DAX, Power Query, data modelling, star schema, incremental refresh), dashboards and data visualization, KPI reporting, requirements gathering, ETL, Excel, SQL (basic)
- Operations & ERP: production and shift reporting, Oracle ERP reconciliation (batch, input/output and inventory records), discrepancy investigation, downtime tracking, SOPs and process documentation
- Data & development: REST APIs, Microsoft Fabric / OneLake, pagination and incremental loads, Bubble.io (no-code), AI-assisted coding (Codex), React, TypeScript

CERTIFICATES & LANGUAGES

SQL for Data Science, UC Davis (Coursera), 2024 | English (professional) · Polish (A1, learning)
